

# How to Use The Connector Cover

**WARNING:** If your gloves are operated with the connectors exposed, it is possible for the electronics to endure significant stresses if the connection is pushed or pulled. The connector cover protects the connection; eliminating the potential for these stresses to occur and ensuring that the performance of your gloves is not accidentally compromised.

<b>Hold the glove, gripping each connector as shown</b>	<b>Grab and pull the right side of the cover to open the left side of the cover</b>	<b>Insert the left connector into the cover</b>
		
<b>Grab and pull the left side of the cover to open the right side, exposing the connector head</b>	<b>Make the connection</b>	<b>Connection completed</b>
		

# How to Attach The Lanyard

<b>After inserting the lanyard through the glove pull strap, feed one end through the open loop of the other end, then pull to tighten the attachment</b>			<b>Insert your hand through the end of the lanyard, tighten it around your wrist, then don your glove</b>
